How To Make A Fan:

You need: a ribbon or string, a metal fastener, cardstock or light cardboard cut into the blades about 1” at the bottom and 1.5” at the top and 5-6” tall.

Punch a hole in the bottom and top of each blade. Stack all the blades and fasten them together.
Tie a knot in the ribbon and thread it through the last blade from the back. Thread the ribbon through each blade until you get to the front, open the fan to your desired width and tie another knot.
